stories about how groups started

Breweed from coverstations,
this text can support you when starting
a permacomputing collective.

Thanks for your suggestions. I will put them into the design.

Text written by **Ola Bonati**, based on interviews with **Anna Meisel** (London) and **Colm O'Neill** (Archipielago), **Permacomputing Club**, **Brennan Howell** (Wilderland permacomputing group), **crunk** and **dl** (rotterdam, permacom-puting.net), **Brendan Howell** (Berlim Permacomputing Meetup), **Michael Koldner (Node9)**, **Nancy Maturo-Filude** (Autoluminescence), **Simon Repp** (permacom-institute), **Simon Repp** (permacom.com), **Puting Vienna**, and **Steve McLaughlin** (Philly permacomputing + solar punk together with Dave Slingser).

Copy editing and advice by **Marloes de Valk** and **Aymeric Mansoux**. Design for the dedicated website and **Deilia Fuiller** and **Dusan Barok** for contribut-[ing to the early permacom-](https://url.it) **https://url.it** [ing wiki to print tools and discuss-](https://url.it)

Brewing Collections was initiated by Amye Mancuso and Brendan Howell with support from Error 417 with https://post.lurk.org/320x200 https://post.lurk.org/320x200 https://post.lurk.org/320x200 https://ldr.nettime.org/@Error417 https://ldr.nettime.org/@Error417

how to start a permacomputing collective

This is a guide brewed from conversations with initiatives in London (UK), Berlin (DE), Prague (CZ), Philadelphia (USA), Rotterdam (NL), Vienna (AT), Lutruwtia (Tas/AU), County Mayo (IE) and a community from Middle America gathering on servers. This text can support you when starting a permacomputing collective. It isn't a strict recipe but more of a loose framework that can be freely modified to suit local tastes and conditions. Many actions are cyclical and can be seen as opportunities to revisit or re-purpose later.

Start where it makes sense for you.

wait... what is permacomputing?

Permacomputing is both a concept and a community of practice oriented around issues of resilience and regenerativity in computer and network technology inspired by permaculture.

There are huge environmental and societal issues in today's computing, and permacomputing specifically wants to challenge them in the same way as permaculture has challenged industrial agriculture. With that said, permacomputing is an anti-capitalist political project. It is driven by several strands of anarchism, decoloniality, intersectional feminism, post-marxism, degrowth, ecologism.

Permacomputing is also a utopian ideal that needs a lot of rethinking, rebuilding and technical design work to put in practice.

Most importantly, there is no permacomputing kit to buy. See permacomputing as invitation to collectively and radically rethink computational culture. It is not a tech solution searching for a problem. You are free to start your own initiative and use the term permacomputing, however please make sure you understand the purpose and ethos of this project :)

Have a look at the permacomputing wiki <https://permacomputing.net/>

Read the principles <https://permacomputing.net/principles/>

In order for us to have a circular economy of computation, we need to have computational degrowth. But we cannot really do that because we don't have any notion of how to do that. All learning materials are geared towards "do it quick and use whatever materials there are." So this is why we are looking to build alternatives. — d1 and crunk, Rotterdam

I think that will be super helpful [...] if you're just starting off you can just say okay I've seen that this works in another city so I can just try this out and then you don't have to be super creative on your own to come up with cool agendas for meetings but have something as a basis to build on. — Simon, Vienna

Coming together and starting from there would be my advice, rather than imposing a lot of external ideals. It is really [about] starting from where people are at. What are people's computing habits? Let's talk about them! Do they name their hard drive? What do they name their hard drive and why? It's about embodied practice. For me it's very important to start with hardware [otherwise] you just [produce] e-waste. Use examples of things that people understand. — Nancy, Lutruwtia

[The appeal is] also, for a lot of people, that there finally is something that isn't negative, that isn't like a critique or a "we're all doomed" story but actually something positive. — Steve, Philadelphia

we use fermentation as a model for collective action

Fermentation is a method, a slow, interdependent process shaped by invisible forces. Like microorganisms that preserve and transform, our work fermentates beneath the surface, unfolding, unfinished.

Fermentation starts spontaneously. Until the 19th century invention of industrial yeast, most fermentations were based on ambient yeasts already present in the environment. When it comes to original yeasts, there is no need for years of planning or institutionalizing, they just need a little bit of support to get a community started. We just need a little bit of initiative.

Fermentation is a multiplying process. A tiny bit of yeast, when fed properly, can take over a huge vat. A nourished community can develop and grow.

Fermentation has momentum. Once you get it going, all you have to do is keep the conditions right. Groups and collectives carrying a code of conduct for example, keep their momentum for the right conditions, a welcoming and inclusive atmosphere in territories that have been living in precarious conditions, topics such as permacomputing or low-tech is very different from creating and maintaining groups focused on niche sources. Creating and maintaining groups focused on niche sources, recognizing the vast differences in privileges and responsibilities under occupation, imperialism, and colonialism for centuries.

Fermentation can go dormant and be restarted. When energy levels temporarily dwindle, the group activity slows until a new impulse arrives. Fermentation is symbiotic - aim for accessibility and intersectionality - connect with other groups and welcome people with related interests and politics, yet with varying backgrounds and perspectives.

Like a fermentation process, this guide invites interaction and transformation. Apply it in parts or as a whole, start where it feels right. Don't panic, organize!

Online version at <https://brewing.permacomputing.net>

Suggestions

Host open activities or study sessions to invite newcomers.

Organize cross-city visits or online reading groups with other permacomputing collectives.

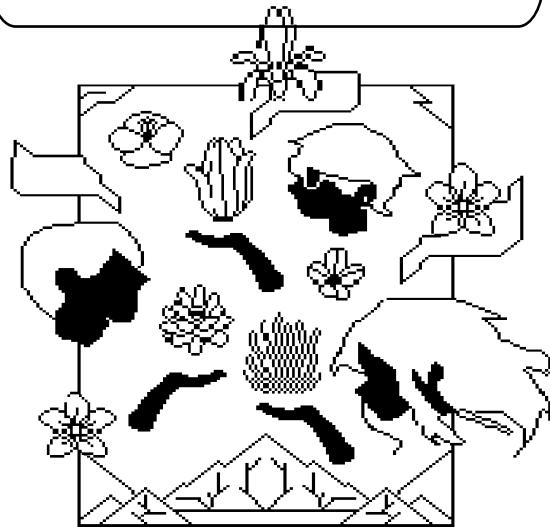

Publish your reflections — not polished results — in a zine, on the permacomputing wiki, an online notebook or paper.

Let members create spin-offs or parallel experiments. Keep your brew alive by staying porous — new people, new ideas, same care.

Thinking about permacomputing in other regions of the world implies recognizing the vast differences in privileges and responsibilities such as permacomputing groups focused on niche sources. Creating and maintaining groups focused on niche sources, recognizing the vast differences in privileges and responsibilities under occupation, imperialism, and colonialism for centuries. The best way to heal technology is to heal ourselves. [...] Develops often understand complexity but not communication — you need both. — Michal, Prague

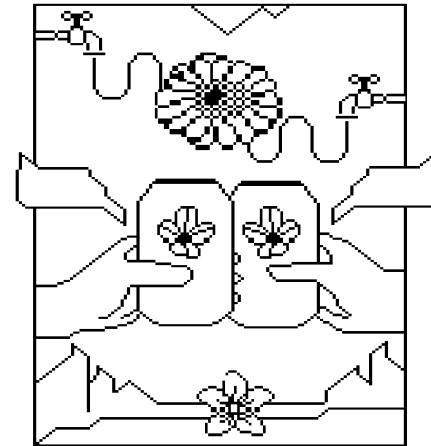

We think the group will form organically, without necessarily establishing it in advance. If you decide to formalize a group, try not to have hierarchies, and avoid positions of power as much as possible. Invite people who are knowledgeable about the topic to the meetings, as well as projects that may be interested in the conversation. — Archipelago I

brew the base

stories about how groups started

pour and share

reflections, advice, and spreading practices

Find your main ingredients, intentions, and inspiring places.

Every collective starts with a feeling — curiosity, frustration, anger, hope or refusal. Before thinking about tools or topics, think about the emotional and spatial ground that will hold your work.

Permacomputing isn't a movement of optimization — it's a practice of attention, care, solidarity and critique. You do not need to be a computer expert to start reflecting and countering the environmental and human harm done by the most dominant and extractive forms computational culture.

Suggestions

Start from what moves you — not from what's missing in tech.

Connect outward, share knowledge, renew the brew.

When a collective stabilises, the next step is connection — between cities, practices, and disciplines.

Organise workshops, events, protests, actions, moments of exchange. Write and share documentation, tools, and ideas.

Make use of the knowledge and skills of the group to support and help those in need of alternative computational systems. Whether it is to divest from Big Tech, create and moderate safer spaces, or organise activist projects.

The work, that is primarily centred around the Netherlands, that's been going on for years, has had a local ripple effect and there are a lot of people active on this topic. We're not that well organized at the moment but there is a lot of diversity in what's going on. —粗魯且直接，Rotterdam

If you can, anchor your practice in a real, inspiring place: a studio, forest, kitchen, community house or community server. Choose a location that encourages conversation and reflection over production.

Find others who share your interest in finding ways computer technology could be used for other things than surveillance, war, conversion but not take over or steer it too much. — Vienna

Let your personal background shape your entry point — art, activism, economics, biology, engineering, etc.

Quotes

We are proud of our consistency over time, seeing how this idea has been transformed into something concrete that has endured. We will soon celebrate 4 years of presence (in 2026), advancing at a snail's pace. Sometimes the most important thing is to hold the space. — Archipelago I

I just had an itch — and felt that if I didn't start it, it wouldn't happen. — Berndan, Berlin

I fell into coding as a teenager, but I came into permaculture through Marx and political radicalism, more than through gardening. [...] Finding a space that feels inspiring is the most important thing. It just felt right. We wanted a place that isn't about production or efficiency, but about thinking, reflection, and care. — Ana, London

Simon, Vienna

I'm a bit skeptical about dedicating to yet another cause. — Leagu[el] who said "Ok, I would be on board. If we team up, we can do it." If I'm not alone in it and somebody else actually can do it, then I can see this happening, even if they don't go "Oh, so let's look at their website. Oh, it's not on up well. So when we start expanding or bringing in people, doing things very slowly so that we can have everybody set up well with a few, like three or four people. We are putting up flyers every month. — Steve, Philadelphia

and then it'll just keep going on its own. And it just never works that way. You have to put in some effort. Just keep doing that with a few, like the three or four people. — Simon, Vienna

They don't go "Oh, so let's look at their website. Oh, it's not on up well. So when we start expanding or bringing in people, doing things very slowly so that we can have everybody set up well with a few, like three or four people. We are putting up flyers every month. — Steve, Philadelphia

The actual kick-off was not due to me but to [Björn - a colleague] who said "Ok, I would be on board. If we team up, we can do it." If I'm not alone in it and somebody else actually can do it, then I can see this happening, even if they don't go "Oh, so let's look at their website. Oh, it's not on up well. So when we start expanding or bringing in people, doing things very slowly so that we can have everybody set up well with a few, like three or four people. We are putting up flyers every month. — Steve, Philadelphia

I always wanted to do something in this area but initially I lacked the language for it until I found existent papers and discussions around permacomputing, online on Mastodon – this gave me a framework to start. — Colm, County Mayo

A lot of the people who come into the bookstore and become part of this group or other groups, are working in the tech industry or some kind of job that they may have an issue with. They have these frustrations and they feel, especially at work, that they are in the minority and these topics are not welcome. So it's a bit of a breath of fresh air for some folks to just be able to talk a little more freely about their actual political beliefs. — Steve, Philadelphia

We know amazing work has been done – all this practical stuff in the permacomputing community. It has been a place for people to gather and work on some sort of guiding North Star or framework for thinking about digital technology that doesn't absolutely suck. — d1 and crunk, Rotterdam

Suggestions

- Accept uneven growth — some sessions will be full, others nearly empty.
- Let ownership of tasks circulate: invite others to host, teach and decide. Many tasks are not fun but essential: facilitating, maintenance, coordination, cleaning. These needs to circulate. Don't wait to be asked to do the dishes.
- Build small structures and simple systems that can survive if you step back.
- Allow for experimentation — don't be afraid to test new forms of governance or tools.
- Contradictions and differences in pace and opinions will happen; not everyone moves toward degrowth the same way. When interacting with each other, learn to distinguish generative disagreement from toxic behaviour. Enforce your Code of Conduct.
- Not everything needs facilitation. Leave space and opportunities for people to contribute in their own way.

Quotes

At first I did everything — website, announcements, logistics — but over time others started hosting workshops. When I went on holiday, the group continued without me. That was a good sign. Overall I would say; start small, be okay with leading at first, and then let it grow away from you. — Ana, London

It's about seeding the ground, so others can pick it up and spread it. The infrastructure needs to be set up to be able to hold the space, for new people to come so they understand what's going on. — Nancy, Lutruwtia

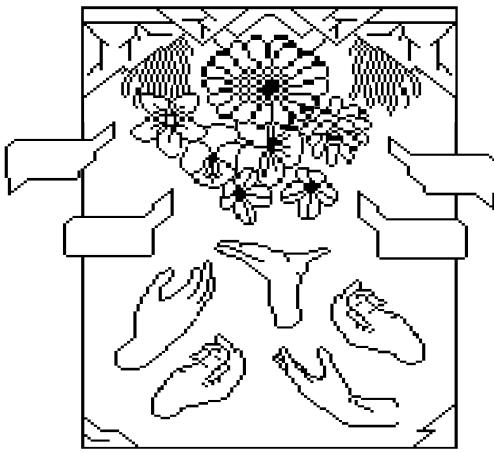

Try to keep the language and terms you use accessible — allow first time visitors to gradually dive into the topic.

Begin with a recurring rhythm (weekly, monthly) — consistency beats ambition.

Suggestions

A collective begins when someone makes an invitation. Start small — a table, a chat, a shared activity — and let curiosity guide the form. Rhythm matters more than scale.

Gather people, build rhythm, and set gentle infrastructure.

add the starter

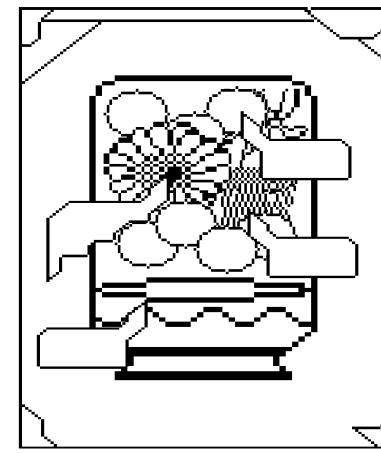

You will also notice when the time comes to write down tasks, divide work and allocate efforts. This doesn't mean creating top down structures. A healthy collective can survive the absence of its initiators.

After the initial excitement, the real work is in staying with it — through quiet weeks, shifting roles, and uncertainty. Fermentation takes time: structure can emerge naturally but requires care and trust.

Others to get involved in organisation and content.

Give it time. Let it self-organise. Care for contradictions. Encourage others to get involved in organisation and content.

*ongoing culture
governance, challenges, and*

let it ferment

Use simple means to organise and communicate: one poster, one shared document, and make use of the permacomputing.net infrastructure (a.o. web hosting and chatroom for your group) and code of conduct. See [on-boarding](https://permacomputing.net/onboarding/).

Choose a format that feels accessible for your gatherings — informal meet-ups over rigid workshops.

Let organisational logistics develop over time, as more people join in. Trust that your understanding of what kind of work, documents, and tools are needed, will become more clear gradually.

Quotes

It was meant to be a single event, but people asked if it was recurring — so it became weekly. [...] Because it's weekly, it feels non-committal, but consistent enough for reflection. — Ana, London

Start small — a table, four people, and an idea is enough. [...] We announce it as an informal meetup so people feel they can just come, drink something, and talk. — Brendan, Berlin

It's not a workshop — it's a living situation. People do what they like, together. — Michal, Prague

Our spaces of gathering are completely digital. Our main one is an XMPP group, where we discuss and share constantly. We also publish in our social network (Akkoma) to know more about our daily lives. Finally, and more rarely, we use Mumble to hear our voices and chat. — Archipiélago I

A lot of people just are intrigued by the idea actually. I've had a lot of conversations where I'm selling somebody a book and they look at the flyer and they say "what is permacomputing?" and I go into my little spiel. People want to learn more about this stuff. — Steve, Philadelphia

Here people interested in permacomputing are those who live the most remotely because they have a need for a kind of resilience. At least in Ireland, that's what I've noticed. When I ran the online [workshop], I was expecting a bigger diversity of people in terms of geography but I was wrong. People from even further away [joined] and they were glad to be able to join online. [...] there are lots of people who literally, as soon as there is a minor storm, lose power and they lose Internet. [...] So, it's really a question of need. — Colm, County Mayo

Somebody — a very nice person who studies at HKU (Utrecht School of the Arts) and is traveling at the moment, came by Varia and had a lot of energy and time and was keen to start it. Then we made a Signal group and a little pad. — crunk and d1, Rotterdam
